

High Power Circulator With 20 dB Isolation From 7 GHz to 12.4 GHz, 50 Watts And N Female

Circulators Technical Data Sheet

PE83CR1009

Features

- Forward/Reverse Power 50 watts
- Frequency Range of 7 to 12.4 GHz
- Female N Connectors
- Low VSWR

Applications

- Radar Systems
- Military
- Wireless Radio Systems
- Telecom Infrastructure
- Communication Systems
- R&D Labs
- Microwave Radio Systems

Description

The PE83CR1009 is a high power circulator offering a forward and reverse power rating of 50 watts over an operational frequency band of 7 to 12.4 GHz. This coaxial part uses N female connectors on all ports and has a minimum of 20 dB of isolation.

Pasternack offers a wide variety of circulators to fit your needs. These unique devices enable two signals to use one channel. The classic use of this three port device is for the line/coax between an antenna and a transceiver, allowing the receive signal to come from the antenna (port 1) to the receiver (port 2) while the transmit signal goes from the transmitter (port 3) to the antenna (port 1). An isolator can be created by terminating one port into a matched load. These components can be used in antenna transmitting and receiving, radar, amplifier systems and anything that requires isolation from a signal reflection and the ability to send signals in opposite directions down a single channel. These circulators feature excellent insertion loss, high isolation and reliability.

Electrical Specifications

Description	Minimum	Typical	Maximum	Units
Frequency Range	7		12.4	GHz
Impedance		50		Ohms
Insertion Loss			0.6	dB
Isolation	20			dB
VSWR			1.25:1	
Forward Power, CW			50	Watts
Forward Power, Peak			50	Watts
Reverse Power, CW			50	Watts

Electrical Specification Notes: Values at 25°C, sea level.
